LED Lighting

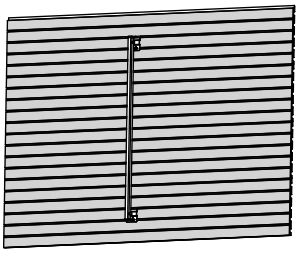
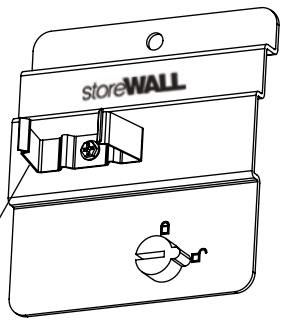
*store*WALL is proud to be the first to offer a new line of innovative lighting products to the garage organization industry. These new lighting products will work with our existing slatwall to light up your garage, your workstation and your items. They are easy to install and require no electrical background.

*store*WALL's tube lights simply need to be plugged into any receptacle outlet and can be directly connected to one another or with our 2ft or 6ft connecting cords.

*store*WALL's unique tube light backplate allows for the easiest installation:

1) Insert two backplates into the slatwall.
2) Snap the tube light into the backplate clips.
3) Plug the tube light into any outlet.





Optional vertical installation: Simply rotate the clip so it is perpendicular
